PROFESSIONAL SUMMARY

Results-driven Python Full Stack Developer and MCA candidate with a Gold-Level Python certification from HackerRank. Highly skilled in architecting scalable full-stack web applications, real-time video conferencing systems, and API gateways using **Python, Django, WebRTC, WebSockets, REST APIs, and MySQL/SQLite**. Proficient in integrating deep learning models (GNNs, YOLO) alongside standard database engines to solve complex real-world challenges with clean, modular code.

TECHNICAL SKILLS

Languages:

Python, Java (Core), SQL, JavaScript (ES6+)

Frameworks & Libs:

Django, Django Channels, REST API, Flask, PyTorch, PyTorch Geometric, OpenCV, Tkinter

Frontend:

HTML5, CSS3, Flexbox, CSS Grid, Responsive UI

Databases:

MySQL, SQLite, Oracle, DBMS

Concepts & Tools:

OOP, WebSockets, WebRTC, JWT Auth, SDLC, Git, GitHub, VS Code, Redis, Celery

EDUCATION

MCA (Master of Computer Apps)

Vignan's Inst. of Info. Tech.
2024 – 2026 | GPA: 8.30

BCA (Bachelor of Computer Apps)

Aditya Degree College
2021 – 2024 | CGPA: 8.82

Intermediate (Class 12)

Sri Chaitanya Junior College
2019 – 2021 | Score: 814/1000

SSC (Class 10)

Bhashyam Public School
2018 – 2019 | CGPA: 9.5

CERTIFICATIONS

• Python Essentials 1 & 2

Cisco Academy

• Python Full Stack Training

Datapro Computers

• Java & DB Foundations

Oracle Academy

ACHIEVEMENTS

🏆 Python (Gold Level) - HackerRank

Earned Gold badge by solving advanced algorithms & data structures challenges.

PROJECTS

MeetApp – Real-Time Video Conferencing Application

[Python](#), [Django](#), [Django Channels](#), [WebRTC](#), [WebSockets](#), [Redis](#), [Celery](#)

- Architected a real-time web video conferencing portal utilizing WebRTC peer-to-peer streaming and Django Channels for WebSocket signaling.
- Engineered dynamic role-based admin controls featuring automated admin handover, waiting room moderation, and custom room code generation.
- Integrated session tracking and analytics capturing peak user metrics, join/leave timestamps, and duration logs.
- GitHub: github.com/sumanthnagaturubhatla-netizen/meetapp

Self-Hosted Android SMS Gateway

[Python](#), [Django](#), [REST API](#), [Android Termux](#), [SQLite](#), [HTML5](#), [CSS3](#)

- Engineered a self-hosted SMS Gateway web platform converting Android smartphones into programmable SMS relay servers over local Wi-Fi.
- Developed RESTful API endpoints for pending message polling, queue processing, and transmission state logging (Pending, Sent, Failed).
- Built a secure Django web dashboard with API key authentication, status tracking, retry mechanisms, and delivery analytics.
- GitHub: github.com/sumanthnagaturubhatla-netizen/messenger

Student Performance Analytics Dashboard

[Python](#), [Django](#), [JWT Authentication](#), [SQLite](#), [HTML5](#), [CSS3](#), [JavaScript](#)

- Built a full-stack educational dashboard for tracking student academic performance, attendance, and placement statistics.
- Implemented secure JWT-based authentication middleware, role-based student access control, and interactive grade analytics views.
- Designed responsive frontend interfaces with automated calendar test schedules and dynamic student profile management routines.
- GitHub: github.com/sumanthnagaturubhatla-netizen/Student-Performance-Dashboard

Intelligent Traffic Congestion Prediction & Control (GNN)

[Python](#), [PyTorch](#), [PyTorch Geometric](#), [GNNs](#), [OpenCV](#), [YOLO](#)

- Built an end-to-end traffic management system merging Computer Vision with Graph Neural Networks (GNNs) to predict urban road congestion.
- Modeled traffic corridors as spatial-temporal graphs, utilizing PyTorch Geometric to dynamically analyze flow dependencies across intersections.
- Implemented real-time vehicle counting and queue detection algorithms using OpenCV and YOLO to feed weight values into graph prediction modules.
- GitHub: github.com/sumanthnagaturubhatla-netizen/MCA-FINAL-PROJECT.git
